

Greencoin

Solving real problems in the world, using
Blockchain Technology and Smart Contracts

One Pager

The first decentralized platform based on sustainable green systems to solve real problems in the world, connecting green systems manufacturers and local Installation companies or certified individuals directly with buyers.

GNC Platform

How it works?

- Manufacturers publish their products or systems to the Web/App.
- Users buy products or systems pay
- Manufacturers ship products to Buyer s.
- Manufacturers provide technical support to users.
- Buyers can hire local Installers.

Main advantages of GNC platform

- Extensive and easy-to-use service.
- Low fees.
- Low transaction costs.
- Detailed sales analysis.
- Advertising support of your business.
- Payment in popular cryptocurrencies (BTC, ETH, etc).
- International markets access.
- Transparent and decentralized review system.
- Tools for customer communication and financial reporting.
- GNC token payment for goods and the platform services at special price.
- On GNC Platform, customers Manufacturers and installers can interact without restrictions.
- Strong reward network to Incentivizing Buyers, Manufacturers and Installers.
- Transaction transparency ensured by the blockchain technology.
- Trustable, Ideal for charitable foundations and organizations.

GNC APP/WEB

Focusing on e-commerce and online markets, Greencoin platform will integrate the latest Blockchain innovations to drive "smart business contracts".

Token Sale

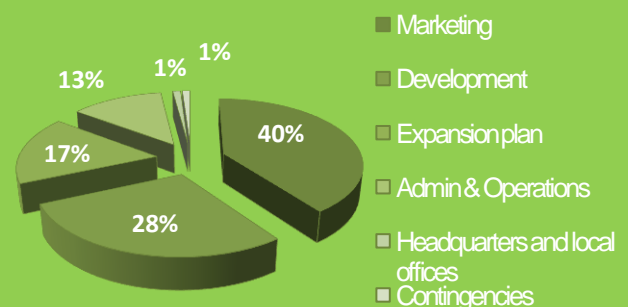

1 ETH = 500 GNC

Pre-ICO Starts:	November 16th, 2018
Pre-ICO Ends:	December 15 th , 2018
ICO Starts:	January 15 th , 2019
ICO Ends:	March 15 th , 2019
Soft Cap:	10,000 ETH
Hard cap:	60,000 ETH
Token:	GNC
Project protocol:	ERC20
Payment methods:	ETC, BTC

Token Distribution

Found Allocation

Problems

- **Environmental problems.** Our environment is constantly changing. There is no denying that. However, as our environment changes, so does the need to become increasingly aware of the problems that surround it. Global warming has become an undisputed fact about our current livelihoods; our planet is warming up and we are definitely part of the problem. However, this isn't the only environmental problem that we should be concerned about. All across the world, people are facing a wealth of new and challenging environmental problems every day.
- **Nourishment.** One in seven people in the world go hungry, this being the main global challenge of our times. In addition to the suffering of millions of people without food, hunger is also holding back progress in areas such as health and education.
- **Fuel (Gasoline).** The use of fossil fuels leads to a series of problems that must be taken into account when producing energy. Currently all, or almost all, are clear that many of the resources provided by nature are not unlimited, but that is not the biggest problem. Its repeated use is not beneficial for the planet and leads to conflicts. The use of the automobile in the United States is one of those that contribute the most to greenhouse gases, the harmful consequences are a reduction of the ozone layer and warmer temperatures. The reduction of the ozone layer threatens human health, vegetation, and the marine ecosystem. It contributes to the rise of the waters, which threaten the coastal regions.
- **Electricity.** Electricity is one of the most used forms of energy in human activity; however the majority of electricity is currently generated by burning fossil fuels (coal, oil, and natural gas). The burning of fossil fuels contributes to the accumulation of greenhouse gases, which is considered as the main factor of climate change and global warming

The main reason of the failures of expansion of the industry:

- We realized that Green systems manufacturers all over the world need a place for further development and product launch to the international market.
- A manufacturer getting into a global market requires considerable investments at the early stage and further monthly expenses for the maintenance of the online shop
- **Lack of customer's confidence in an unknown seller.** The customer prefers verified sellers who offer goods of confirmed quality, while the unknown sellers with no reputation have to compete with them
- **Lack of proper "online sales pitch" for items.** Each purchase, especially the one made online, is based on many parameters. The lack of the product description, parameters, good-quality photos, video overviews and customer reviews negatively impact sales.
- **Impossibility of automatization.** Manufacture owner is not ready technologically to make an online store completely automatic;

Expansion Plan

We have concrete plans and teams ready to an expansion. Our plan is to conquer all the promising markets for the use of green systems, with our business strategy and tactics we will create a positive chain network reaction where our partner businesses will get more customers and more orders

Rewards Network

To promote and popularize the Greencoin ecosystem, a strong reward system will be created for all the participants of the platform using GNC Token as a means to carry out all kinds of rewards. , in this way the expansion will be even faster.

Greencoin Solutions

One of the main features of Greencoin is the use of Blockchain technology and smart contracts, what will make the platform transparent, open and as safe as possible for both transaction parties, reduction of transaction costs and business costs, and simplification of the purchase process

Greencoin a platform created for buyers, green systems manufacturers and systems installers all over the world, with an easy to use online store interface,

Greencoin integrates all the necessary tools for starting the expansion and promoting the products to other countries' markets.

Transparency of information makes it possible with modern e-commerce form, where each manufacturer will have a personal page with Greencoin-certified products available for purchase, and buyers will be able to make purchases from their laptops or mobile phones. All transactions will be processed with smart contracts.

Decentralization, globalization and the opportunities presented by the use of cryptocurrency in the project are our competitive advantages over other business solutions existing in the industry today.

Greencoin Goal

The ultimate goal is to create a productive environment, an autonomous, decentralized and business-focused community using the power of blockchain technology for the distribution of systems that help the sustainable development of the planet, using the Greencoin platform that is driven by Ethereum, a computing platform distributed in blockchain, which simplifies the management of commercial smart contracts and guarantees their enforceability.
